RagraphBPH-class    *Class "RagraphBPH"*

---

## Description

The purpose of this class is to represent a laid out version of a `graphBPH` object. The laying out is performed by the **Rgraphviz** package. This is an intermediate step in the process of drawing a `graphBPH` object.

## Objects from the Class

Objects of this class should be created via the `graphLayout()` function.

## Slots

**graph:** Object of class `Ragraph`. The laid out graph.

**allNodes:** Object of class `character`. The names of all nodes in the graph.

**nodes:** Object of class `character`. Records normal nodes in the graph.

**edgeNodes:** Object of class `character`. Records edge-nodes in the graph.

**edgeNodeIO:** Object of class `list`. Records which edges enter and exit each edge-node.

## Methods

**plot** signature(`x` = "RagraphBPH"): draw a representation of the hypergraph where edges between normal nodes in the graph pass through an intermediate edge-node in a nice smooth curve.

**edgeDataDefaults<-** signature(`self` = "RagraphBPH", `attr` = "character", `value` = "ANY"): set the default drawing attributes for all edges.

**edgeData<-** signature(`self` = "RagraphBPH", `from` = "character", `to` = "character", `attr` = "character", `value` = "ANY"): set a specific drawing attribute for one or more edges.

**nodeDataDefaults<-** signature(`self` = "RagraphBPH", `attr` = "character", `value` = "ANY"): set the default drawing attributes for all nodes.

**nodeData<-** signature(`self` = "RagraphBPH", `n` = "character", `attr` = "character", `value` = "ANY"): set a specific attribute for one or more nodes.

```

nodes <- c(LETTERS[1:5], paste("R", 1:3, sep=""))
testgnel <- new("graphNEL",
               nodes=nodes,
               edgeL=list(
                 A=list(edges=c("R1", "R2")),
                 B=list(edges="R2"),
                 C=list(),
                 D=list(edges="R3"),
                 E=list(),
                 R1=list(edges="B"),
                 R2=list(edges=c("C", "D")),
                 R3=list(edges="E")),
               edgemode="directed")
testbph <- graphBPH(testgnel, "^R")
testrabph <- graphLayout(testbph)
edgeDataDefaults(testrabph, "lwd") <- 1
edgeData(testrabph, c("A", "R1"), c("R1", "B"), "lwd") <- c("3", 5)
edgeDataDefaults(testrabph, "color") <- "black"
edgeData(testrabph, c("A", "R1"), c("R1", "B"), "color") <- "red"
nodeDataDefaults(testrabph, "margin") <- 'unit(2, "mm")'
nodeDataDefaults(testrabph, "shape") <- "circle"
plot(testrabph)
graphDataDefaults(testrabph, "arrowLoc") <- "middle"
graphData(testrabph, "arrowLoc") <- "end"
plot(testrabph)
graphData(testrabph, "arrowLoc") <- "none"
plot(testrabph)

```

graphBPH-class

*Class "graphBPH"***Description**

A bipartite representation of a hypergraph. The purpose of this class is to support visualization of the hypergraph; it is not intended for analysis or manipulation of the hypergraph.

**Objects from the Class**

Objects can be created by calls of the form `new("graphBPH", graph, edgeNodePattern, ...)`. There is also a convenience function `graphBPH()`.

A `graphBPH` object consists of a `graphNEL` object, which must obey some strict rules:

- nodes in the graph are divided into two sets: normal nodes and edge-nodes,
- all edges in the graph must connect a normal node to an edge node,

- the graph must be a directed graph.

The `edgeNodePattern` is a regular expression that is used to define the set of edge-nodes.

### Slots

**graph:** Object of class `graphNEL`. This graph must obey the constraints described above.

**edgeNodePattern:** Object of class `character`. The regular expression used to define edge-nodes.

**nodes:** Object of class `character`. Records which nodes in the graph are normal nodes.

**edgeNodes:** Object of class `character`. Records which nodes in the graph are edge-nodes.

**edgeNodeIO:** Object of class `list`. Records information about which edges enter and exit each edge-node.

### Methods

**plot** signature (`x = "graphBPH"`): draw a representation of the hypergraph where edges between normal nodes in the graph pass through an intermediate edge-node in a nice smooth curve.

**graphLayout** signature (`graph = "graphBPH"`, `layoutType = "missing"`): convert the `graphBPH` object to a `RagraphBPH` object (using a default layout method).

**graphLayout** signature (`graph = "graphBPH"`, `layoutType = "character"`): convert the `graphBPH` object to a `RagraphBPH` object (using the specified layout method).

### Examples

```
nodes <- c(LETTERS[1:5], paste("R", 1:3, sep=""))
testgnel <- new("graphNEL",
               nodes=nodes,
               edgeL=list(
                 A=list(edges=c("R1", "R2")),
                 B=list(edges="R2"),
                 C=list(),
                 D=list(edges="R3"),
                 E=list(),
```

```

      R1=list(edges="B"),
      R2=list(edges=c("C", "D")),
      R3=list(edges="E"),
      edgemode="directed")
testbph <- graphBPH(testgnel, "^R")
plot(testbph)

# A Hypergraph equivalent
dh1 <- DirectedHyperedge("A", "B", "R1")
dh2 <- DirectedHyperedge(c("A", "B"), c("C", "D"), "R2")
dh3 <- DirectedHyperedge("D", "E", "R3")
hg <- Hypergraph(LETTERS[1:5], list(dh1, dh2, dh3))
plot(graphBPH(hg))

```

graphBPH

*Constructor for graphBPH objects*

---

## Description

A convenience constructor for `graphBPH-class` objects. This is a generic function.

## Usage

```
graphBPH(graph, edgeNodePattern, ...)
```

## Arguments

<code>graph</code>	Some form of graph that is to be converted into a <code>graphBPH</code> object.
<code>edgeNodePattern</code>	A regular expression used to distinguish between normal nodes and edge nodes.
<code>...</code>	Potential arguments to other methods.

## Value

An object of class `graphBPH-class`

## Methods

**graphBPH** signature(`graph` = "graphNEL", `edgeNodePattern` = "character"):  
create a `graphBPH` object from a (directed) `graphNEL` object.

**graphBPH** signature(`graph` = "Hypergraph", `edgeNodePattern` = "missing"):  
create a `graphBPH` object from a `Hypergraph` object (where all `Hyperedges` are `DirectedHyperedges`).

## Author(s)

Paul Murrell

---

graphLayout	<i>Layout a graph.</i>
-------------	------------------------

---

**Description**

This function is designed to layout a graph using the **Rgraphviz** package. The **hyperdraw** package makes this a generic function with a method for `graphBPH` objects. The function of the same name in the **Rgraphviz** package is used as a method for `Ragraph` objects.

**Usage**

```
graphLayout(graph, layoutType, ...)
```

**Arguments**

<code>graph</code>	An <code>graphBPH</code> object, which is to be laid out.
<code>layoutType</code>	The layout method (e.g., <code>dot</code> or <code>neato</code> ).
<code>...</code>	These arguments will be passed to the <code>agopen()</code> function.

**Value**

An `RagraphBPH` object.
